

Product Overview — Demo Tour

Walk-through: Niederdorfstrasse 21, 8001 Zürich

Altstadt pedestrian zone · 200 m east of On's Limmatquai flagship · cannibalization + flood + multi-brand competition all firing

OSM / OSMnx POI fetch + classification	BFS STATPOP Demographics (24 ZH munis)	BAFU Flood-risk overlay + override	ESI · CCRS Sustainability framework	Bechtiger 2024 Empirical rent coefficients	Glass Box Every dimension inspectable
--	--	--	---	--	---

Geocoded site · cannibalization preview · BAFU flood map

Niederdorfstrasse 21 is 200 m east of the existing On Limmatquai flagship · still inside the Sihl/Limmat HQ100 flood perimeter · On-site Snipes Niederdorf already in the curated competitor list.

Step 2 · Market overview · BFS demographics + premium-hotel signal

Population · 5-yr growth · Kaufkraft · age 18-45 · curated hotel count in radius

Score weights

Weighted dimensions for the Site Score (Step 5). The tool is brand-neutral — these and on_brand.json drive behaviour.

Zürich Kaufkraft index 118 (CH avg 100) · 38.5% age 18-45 share · 16 500 hotel beds · curated 5★/4★ hotel count side-by-side with OSM.

Sport · Symbiose · Premium · Competitor · Negative · Partner · + curated overrides + analytical heatmaps

Sport · Symbiose · Premium · Competitor · Negative · Partner · + curated overrides + analytical heatmaps

12-step name-then-tag classification cascade. Always-visible curated competitor table catches Adidas, Foot Locker x 3, Snipes x 3, Titolo — the real Zürich-city competition that OSM under-tags.

Tuned log-saturation curve · 6 walk-amenity categories as map layers · Niederdorfstr. Walk ~71/100, Transit 100/100

7-dimension normalised 0-100 score · BAFU flood penalty + Bechtiger ESI Δ applied post-aggregation

NPV · IRR · Payback · Occupancy Cost Ratio · Cash-on-Cash · Break-even sales · Bear/Base/Bull

Leasehold model (no property purchase). Industry-standard KPIs for retail flagship: OCR target <10%, Cash-on-Cash Y1 indicates fit-out payback speed, rent escalation slider models Swiss commercial-lease LIK indexation.

Proximity layers · Niederdorfstrasse 21 (1/3)

Environment & access · flood · running · pedestrian · shop density

BAFU flood hazard

Surface-runoff WMS overlay. Niederdorfstrasse sits in the Sihl/Limmat HQ100 perimeter — blue tint marks flood-exposed area. Drives the -15 pt flood penalty + business-interruption insurance.

Pedestrian streets

Fussgängerzonen incl. those where trams + taxis are allowed (Niederdorf, Limmatquai). Altstadt is an almost continuous pedestrian ribbon — high spontaneous-footfall context.

Running infrastructure

OSM parks (green fill) + running routes / hiking trails / cycleways (orange lines). Public-data substitute for the Strava heatmap (~140 features). Limmatufer running corridor visible.

Shop-density heatmap

Every OSM shop within 1.5x radius, log-graded so moderate streets light up too. The Altstadt retail core glows red — confirms a dense, contiguous shopping environment.

Proximity layers · Niederdorfstrasse 21 (2/3)

Mobility & retail footprint · transit · all shops · cannibalization · POI split

 **Transit stops**
Mode-coloured: rail (dark blue), tram (blue), bus (grey). Central Zürich is tram-saturated; Hauptbahnhof + Central tram hub within the radius drive the high transit score.

 **All shops (generic)**
Raw retail footprint — every OSM shop=* (purple) regardless of brand classification, ~800+ in radius. Shows total commercial intensity before brand-aware scoring.

 **Cannibalization overlap**
Catchment circles + connector lines to existing On stores, colour-coded by overlap. Niederdorfstrasse 21 is ~200 m from the Limmatquai flagship → HIGH overlap (red), the key risk here.

 **Classified POI markers**
The 6 brand-aware categories isolated — sport (blue), symbiose (green), premium (gold), competitor (red), negative env. (orange), partner (grey). The core proximity-intelligence layer.

Proximity layers · Niederdorfstrasse 21 (3/3)

Brand-fit signals · competitors · walk amenities · sport density · hotels

 **Competitor catchments**
Each red 200 m circle = a detected or curated competitor (Foot Locker, Snipes, Titolo, Adidas Bahnhofstrasse). Explicit catchment rings rather than a blurred heatmap.

 **Walk-amenity density**
Food / grocery / services / education / leisure / retail amenities as a green density heatmap — the underlying data behind the Walk Score (Niederdorf ≈ 71/100 after May 2026 tuning).

 **Sport-facility density**
Gyms, studios, courts, pools as a blue density heatmap. Maps where On's performance customer actually trains — a core symbiose signal for the brand.

 **Curated hotels**
5★ (green) / 4★ (orange) dots from the 19-hotel curated list (OSM under-tags stars). Premium-environment proxy feeding the PEI sub-score.

Methodology · Data sources · Honest trade-offs

OpenStreetMap (OSMnx)

Single query covers sport venues, retail brands, hotels, transit stops; classification is brand-aware (Lululemon → symbiose, Nike → competitor) with the 12-step priority cascade in SCORING.md §1.

Curated competitor overrides

OSM under-tags mono-brand competitor stores in CH — analyst-verified list catches Adidas Bahnhofstrasse 56, Foot Locker × 3, Snipes × 3, Titolo. Nike + Puma Sihlcity exits documented for narrative.

BFS STATPOP + Kaufkraft

Population, growth, age structure, purchasing-power index seeded for 24 ZH-relevant municipalities — extensible CSV, no auth.

BAFU surface-runoff hazard

WMS overlay on the map + analyst override for the 4 real On CH sites. Source: ANALYSE_*.txt files in repo root.

ESI (CCRS/UZH) + Bechtiger 2024

Sustainability factors with empirical coefficients: accessibility ($p < .001$), daylight ($p = .021$), ÖV class (n.s. for rent). $n = 288$ Swiss income properties · MAS Real Estate UZH.

Leasehold Pro-Forma

5-yr cashflow for a leased flagship (NOT a property purchase). Industry KPIs: Occupancy Cost Ratio · Cash-on-Cash · Break-even sales · Total rent over lease · rent escalation slider.

Glass Box scoring

Every dimension normalised 0-100 before weighting. Flood penalty post-aggregation. Sustainability Δ additive outside the 100-pt base.

Honest trade-offs

Pandana → amenity-richness · BAFU identify API doesn't exist for the runoff layer → override + WMS · Strava global heatmap requires auth tokens that expire every ~2 weeks.
